From nautical world with passion

The Italian company, leader in the supplying of stoves and sinks in the nautical world, is increasingly more popular in the caravan market thanks to a high quality product with excellent designs and offering optimal performance. Flexible production and a high level of personalization of the products are the company's unique characteristics

Crystal sets a new standard

The great experience of Can in the furnishing of stoves for luxury yachts and sailboats has created new standards also in the sector of recreational vehicles. When the company from Brescia in 2010 proposed for the first time to the camping sector its Crystal stoves, characterized by a surface of tempered glass with embedded burners, it certainly wasn't expected that shortly after it would give rise to a true tendency, followed also by the multinational giants. Today, in fact, in many high level vehicles stoves are installed with a base of tempered glass, making Crystal the founder of a new standard. A thanks to the other competing products Can is able to highlight even more efficiently the strong points and distinguish them from those who produce merely using the logic of large numbers. The Italian company is able to offer a significant flexibility with minimal decisional processes and an efficient productive reality while being aided by modern instruments and facilities. To its clients Can offers a high level of personalization that involves the colour of the glass and the logo of the brand, but arrives all the way to the creation of items and special forms for stoves created for specific needs of the clients regarding dimensions or design.

Today the Crystal range is comprised of numerous products, among which is the angular model PV1353 or the models with integrated sink PV1364, PV1362, PV1360 and the newest PV1366 Essential with the sink at the centre, two lateral lighters and glass with a mirror effect. The collection's burners installed are an auxiliary (with a capacity of 1000 Watts - consumption 73 g/h) and a semi-rapid (with a capacity of 1900 Watts - consumption 127 g/h), and both come with thermocouple.

Novelty for the compact van

Can has always specialized in the production of sink and burner systems for vehicles and for the more compact boats. The most popular solution until now has been from the "Foldy" range with LC models including a sink with a folding cover on whose base a single burner stove is installed. In 2012, Can introduced a new range that offers very compact integrated sink and burners It is an evolution of the tested "Hoodiny" that offer only the stove and in an inferior price range compared to the top of the range "Crystal" series and offers two models: FL 1323, with a width of 530 mm and depth of 325 mm, with a circular sink and a single burner with a square sink, two lighters and dimensions equal of 720 x 338 mm.

Exhibitions:
Caravan Salon Düsseldorf (DE) - 31.8 - 8.9.13
Motorhome & Caravan Show 2013 - Birmingham (UK) - 15.10 - 20.10.13

A barbecue, one idea, many solutions

The idea to fix the barbecue to a slide that allows it to be put away and quickly extract the barbecue by a locker was casually born during an expository event. The slide in the photo was dedicated to a diverse and heavier use. If it is only for the barbecue this system must be light and little cumbersome. The solutions can be varied: it is possible as well to foresee a placement inside the locker door. Having a barbecue available outside to be able to cook is a significant added value for those who love tourism by motorhomes and caravans.
Made in inox steel, BQ 2989 also includes a burner with a power of 4,5 Kw, from a piezo ignition and from a security thermocouple (for the interruption of the gas supply in the case of turning off the flame). Among the optional extras is the adaptation kit for the Gamping Gaz and also the storage tub to use for the carving fork when necessary to position or grease the cuts of meet or fish and includes the trays in circular form in which to store salt and other spices and the sack of weatherproof covering.

The oven in the motorhome includes a grill as well

From experience in the nautical sector where Can specialized in the production as well of gas burners, arrives the CU1305 "Kalahari" and CI1306 "Sahara". With a capacity of 30 litres in the first and 40 litres the second, these burners include a semi-rapid burner of 1700 Watts with thermocouple. Made in inox steel with a mirror finish, it comes with a door with double tempered glass silk-screen print and thermometer. The weight is 28 kilos for the smallest and 30 kilos for the CU1306 model.

Can in a video

Can has created an institutional video that demonstrates some of the production process phases.
In the video, which lasts 4 minutes, several of the phases of production are documented with the working of inox steel, from the cutting to the final assembly of the products and their tests.
Created in high definition, using the latest technology of machines of recovery and postproduction, it was officially presented at the latest METS exposition in Amsterdam.
The video is visible on the CAN You tube site: http://youtube/jeJf8FOSne4, on the CAN website: http://www.can-web.com/ or on its Facebook page: https://www.facebook.com/Can.Hobs.and.Sinks

Company Profile

CAN, which has been operating in the nautical market for three generations is known for the reliability of its products, the quality of the materials and the capability of comprehending daily nautical life and translating it into concrete and innovative designs. Today, more than ever, the heart and mind of the company are represented by Mauro Bellini, supported by the ever more determined contribution of his sons, Lorenzo and Fabio who, together with their father, place their endless creativity and contagious passion at the service of the company in order to tie the CAN brand closer to the world of stainless steel accessories. In 2009 CAN decided to take on a new challenge, introducing the MOTORHOME/CAMPING sector into its range of products, thereby entering new and stimulating markets. As a result, the Bellini family has enriched and diversified its range of products with its usual care and attention to details always for the sake of quality and consistency.
