Further improvements to the Plein-Aircon 12V air conditioner, now available in two versions, but Indel B's OFF range also sees the introduction of three new refrigerators

Words Renato Antonini

**I**ndel B, with the OFF line, continues to work with great success on two fronts: on the one hand with the refrigerators, which make up the company's core business, and on the other with the Plein-Aircon 12V air conditioner, a new and promising production channel in the RV sector. Furthermore, these are two types of product, both backed by Indel B's vast experience in the field of compressor refrigeration.

Starting with the Plein-Aircon 12V, the revolutionary compressor air conditioner designed by Indel B to operate using just the 12 V auxiliary battery, without having to connect to the external 230 V mains. It is designed for air-conditioning the sleeping area of camper vans and compact semi-integrated vehicles, two vehicle categories that have had a real boom on the European market in recent years. The 2024 model of the Plein-Aircon 12V was unveiled at the 2023 edition of the Düsseldorf Caravan Salon, showing not only a cosmetic restyling, but also including functional and construction modifications. An evolution that underlines Indel B's major investment in a

product that is deemed strategic. The range is now divided into two versions: Plein-Aircon 12V Ringlight and Plein-Aircon 12V Lightbox. Both adopt a new diffuser with a more efficient configuration of the fins, which allows for more precise air distribution and greater flexibility of use, even allowing for vertical air flow. The Ringlight version features a customisable central panel and a perimeter LED light. It is possible to choose between a white or blue light.

The customisation possibilities of the viewing panel are many and allow Plein-Aircon to be integrated into the interior décor style. It is possible to apply textiles (also soft-touch), wood, wood-effect laminate or other patterns to the panel surface; in short, maximum freedom of expression is on offer. The Lightbox version, on the other hand, is

designed to reproduce the luminous effect of a rooflight, so it has a diffused artificial light, which can be either white or blue. The blue light creates a pleasant visual effect, but is also perfect for night driving, as it doesn't disturb the driver. For the revamped Plein-Aircon, in addition to manual operation there is also a remote control via an app on your smartphone, using Bluetooth or Wi-Fi. Indel B's Pre-Adaptive technology is designed to adapt the function of the air

conditioner by learning the user's habits, but also to fine-tune its performance according to the weather conditions in the current or future set location.

### Three new refrigerators

As far as Indel B's OFF refrigerators are concerned, three new models have been added to the range.

The Elite 86 refrigerator is part of the Italian manufacturer's most stylish and innovative range: it is a compressor refrigerator with a vertical construction, designed to make the best use of tight interior spaces. It has an overall capacity of 85 litres (freezer compartment 10 litres) and the interior

Drawer 85, also available in 130L capacity

can be configured in various ways thanks to the freely movable shelves and the accessories provided. This refrigerator weighs 23 kg, has a height of 862 mm, a width of 380 mm and a depth of 522 mm. Power input is 45 W and consumption is 0.5 kWh/24h. The Elite line of refrigerators is designed for built-in installation with a front in view, thanks to its tasteful design: the minimalist handle is flush with the door and the door itself has a stainless steel effect with an anti-touch finish. The SECOP compressor is energy-efficient and extremely quiet. Flush-mounting the refrigerator is quick and easy thanks to the Easy Fix system.

The Drawer 85 and 130 models are totally different: they too are compressor refrigerators, like the rest of Indel B's production, but they do not have a front opening door, but rather a drawer opening, and therefore with sliding loading space on the outside. They are designed primarily for installation in motorhomes vans and mini-vans, for flush-mounted installations capable of adapting to awkward spaces. The Drawer 85 has a total volume of 85 litres (freezer 11 litres) and weighs 22.5 kg. It is 630 mm high and 475 mm wide, while its depth is 551 mm. Low consumption: 0.36 kWh/24h. The movements are made easy and smooth for the user thanks to the stainless steel guides fitted with roller cushions. The Drawer 130 model has a high capacity, which as the name indicates totals 130 litres (freezer compartment 13 litres). The loading space is flexible, thanks to the product holding accessories and repositionable drawers. The dimensions are 755x525x556 mm, while the total weight is 26.5 kg.
